

Planar's Xscreen Makes Projection An Option In Higher Ambient Light Locations

Planar Xscreen's unique technology allows a video projector to display a high contrast image in places traditional screens have washed out. Xscreen reflects ambient light from windows and lamps away from the screen and greatly enhances the projected image. Imagine getting twice as much brightness and contrast as a traditional screen even in a fully lit room. Watch movies in a cinema setting, play video games on a larger-than-life scale and experience TV and sports like you've never imagined with front projection in your client's ambient light environment.

The Planar Xscreen uses the innovative Daytime Film Technology™, a specially designed film surface that produces a super-sharp, vivid and colorful image in practically any lighting situation. The surface features a 4mm layer of hardened glass beneath the actual screen surface. This guarantees that the screen is perfectly flat and virtually refraction-proof. The projected image is vibrant and stunning.

Cosmetically the Xscreen has a high gloss black frame similar to that of a plasma or LCD panel. At a recent event at our office - one of the dealers attending thought they were seeing a new large LCD panel being deceived by the frame appearance as well as the bright and well displayed image in our well lit conference room.

With sizes from 60" to 100", the possibilities are numerous. Combine a Planar PD7010 projector with an 80" Xscreen for a picture that rivels larger panels in size but hits the sreet at under \$4000. Client's can afford to go big in non-traditional theater locations and projectors now fit into many more rooms in the client's home.

Model	Dimensions (inches)	Weight (lbs.)
60" model	60" x 34.25" x 3.15"	69 lbs
70" model	70" x 40.55" x 3.15"	71 lbs
80" model	80" x 44.88" x 3.15"	95.5 lbs
100" model	100" x 54.33" x 3.74"	132 lbs
